I have known **David Hollandsworth** musically for some years now and it never ceases to amaze me that he just keeps on getting better and better with each passing year.

Here on this latest single called **Andromeda Suite** he explores the region of deep space we know all too well and brings to the table a single that has all the hallmarks of a space odyssey of brilliance.

The gentle opening reminds me in parts of the great *Vangelis*, but then smoothly floats into an oasis of sound redolent of the space man himself *Kevin Kendle*. This combination is a total winner and at times I found this opus of class quite emotional to listen to as well.

The soft and textured synths manifests a realm so vast and layered, the addition of the ethereal vocals here was a moment of sublime genius. I for one am extremely glad that Hollandsworth went long form at some fifteen minutes plus on this single, as it give me so much time to explore its depths and dimensions, a top notch release of great quality indeed.
